```

```
        for(j=i+1;j<n1;j++)
```

```
        {
```

```
            if(a1[i]>a1[j])
```

```
            {
```

```
                temp=a1[i];
```

```
                a1[i]=a1[j];
```

```

        a1[j]=temp;
    }
}

printf("asending order is\n");
for(i=0;i<n1;i++)
{
    printf("%d\t",a1[i]);
}
}

```

The screenshot shows a Windows command prompt window titled "C:\Users\HP\OneDrive\Desktop\New folder (3)\sorting\asending array by func.exe". The user enters the value of n as 5 and then enters the values for the array: 10, 20, 60, 80, 90. The program outputs "asending order is" followed by the sorted array: 10, 20, 60, 80, 90. The window also shows the process exit time and a prompt to press any key to continue.

```

C:\Users\HP\OneDrive\Desktop\New folder (3)\sorting\asending array by func.exe
enter the value of n
5
enter the values for array
10
20
60
80
90
asending order is
10    20    60    80    90
-----
Process exited after 10.85 seconds with return value 0
Press any key to continue . . .

```
